**BODY FREEZE  
COMPRESSION THERAPY**

## HOT NEW SUMMER TREATMENT

A body contouring frozen product is first massaged onto the skin to lower the body temperature whilst the body is manipulated with wooden body sculpting tools from Columbia to stimulate and reshape the body. The abdomen receives Chinese acupressure massage to remove blockages and improve "Chi". The body is then wrapped in compression bandages soaked in a cryogenic lotion. Compression bandages improve circulation and the Cryo-tone lotion keeps the body temperature low to maximize calorie burn and improve body image. Results are immediate!

### CRYO-TONE STICK

Remineralizing seaweed and a herbal mixture of active ingredients, trace elements and antioxidants melt into the skin. This detoxifying product is applied on the skin frozen.

### CRYO-TONE LOTION

Crystallized menthol and seaweed with mineral salts cool and stimulate the body. This wellness lotion provides the body with a feeling of weightlessness.

### COMPRESSION WRAP

Elastic compression bandages soaked in Cryo-tone Lotion work by compressing the soft tissue on the tummy, buttocks and hip area to lift and shape the body. During a session the venous system is exercised moving the blood from the legs back to the heart.

#### ICE THERAPY

Ice have been known to bring down inflammation and prevent swelling in sports injuries, but now scientists have shown they could also help people lose inches. Simply applying ice to a fatty area like the thighs or stomach can burn away hard-to-shift calories. The cold works by triggering the body into turning flabby white fat into calorie burning 'beige' fat.

We have specifically developed a cellulite toning product that is applied onto the skin frozen. Cryo-tone Stick is easy to apply and left on the skin to reduce the appearance of cellulite. It becomes the base for the wood therapy and acupressure massage that follows. The natural active ingredients are released during application while the medicinal massage is performed.

#### MADERO & ACUPRESSURE MASSAGE

Madero massage is a unique South American treatment from Columbia utilizing hand crafted wooden tools designed to sculpt and reshape the body. Wooden devices specializing in massaging adipose and stimulating the body functions to work at a higher capacity so results are achieved faster than with traditional hand massage. Our technique features contouring boards, rollers and Swedish cupping.

Abdominal acupressure massage is a technique that has been used by the Chinese for centuries. Palpating the belly has been thought to promote health and wellness in many ways, including pain relief, stress relief, and for overall improvement of the functioning of the digestive tract.

Performing abdominal massage can aid in improving metabolic function and reduce the build-up of wastes in the body which contribute to bloating.

#### COMPRESSION BANDAGE WRAP

Over time and with age, toxins begin to accumulate between the three layers of fat. The accumulation of toxins in the body causes poor circulation, water retention, weakening the body's natural elimination process.

Compression therapy increases pressure on troublesome areas and encourages fluid to flow from high pressure areas to low pressure areas of the body. Regular compression sessions help stimulate the flow of lymph fluid which carries vital nutrients to the cells and cleanse the cells of waste materials at the same time. Cells are filled with oxygen allowing the body to rapidly repair and detoxify itself.

Cryo-tone Lotion is comprised of remineralizing seaweed with magnesium salts that invigorate the body during the compression wrap. The crystallized menthol has a freezing effect on the body. When body temperature goes below 37 degrees the brain sends out norepinephrine receptors triggering brown adipose tissue to release its energy and generate heat.
